Lab Session Resources

Python programming with Jupyter notebooks

Today's Session

In today's lab we worked through the examples in the session's Jupyter notebook. The notebook is available on the **Teaching** page of my academic website, where it opens directly in your browser through Google Colab, so no installation is needed.

About the Teaching Page

The Teaching page hosts a wider collection of notebooks that I have prepared for several courses. This module draws on a **selection** of them, and in each lab session I will indicate which notebooks we cover. Only those notebooks form part of the module. The remaining material is not required, although you are welcome to explore it if you wish to go further.

We work through the selected notebooks together in class, and they remain available afterwards so that you can return to any example at your own pace. Questions are always welcome in class or by email.

If you would like to revise the basics of the language, such as syntax, variables and data types, the W3Schools Python Tutorial listed below is a clear and well organised place to start.
